

ABSTRACT OF THE DISCLOSURE

This cord locking system is designed to fasten two plug ends together preventing the plugs to come apart. The product is made with nylon straps for strength, and hook and loop material to fasten.

New concepts for this invention would include, but are not limited to, flexible materials, non-breakable by blunt force, self adjusting to fit any two sizes of electrical cords at once, and a locking strength that exceeds 100lbs of stress.

The concept of this product, along with the materials used are unique to the industry.
